Short Read Workshop

Day 2 Homework

1.) Practice the `mkdir` command. In your home directory, make a directory called `my_big_stuff`. In that directory, make a directory named `my_blue_stuff` and `my_red_stuff`.
2.) Rsync this directory into your home directory `/scratch/Shares/public/sread2021/scripts`
   a. HINT: this requires the recursive flag and the flag for all … so you have to use man to figure out those flags
3.) Work through the Vim tutorial available on the server by typing in the command `vimtutor` – this tutorial is extensive and can take some time.
4.) Copy the template.sbatch that is in the script directory to a new file called `mytemplate.sbatch`
5.) Change the `<EMAIL>` to your email address in your copy of the script
6.) Use `diff` to determine what is different between template.sbatch and mytemplate.sbatch
7.) Open and work through homework_day2.tar.gz
   Hints:
   - *This file is in `/scratch/Shares/public/sread2021/homework_data_files/day2/`*
   - *remember you can't unzip in a directory you don't own*
   - *You are looking for a file called* `homework.sh in this directory`
      - *Follow those directions!*
8.) Watch videos for day 3
