Short Read Workshop – Homework Day 2

1. Practice the mkdir command. Figure out how to make more than one file at once.
2. Use rsync to copy this directory into your home directory:
   /scratch/Shares/public/sread2022/scripts/day2
   a. HINT: this requires the recursive flag and the flag for all files … so you will have to use man to figure out those flags
3. Work through the Vim tutorial available on the server by typing in the command vimtutor – this tutorial is extensive and can take some time. This is the most important thing for you to practice because you'll need it for the scripts we right tomorrow.
4. Watch videos for day 3
