

# Day 1 overview

- SSH keys and logging on to AWS
- Review library prep and sequencing
- Basic Bash/Intro to Git
- Library QC
- Vim and Vimtutor

# Logging on to the super computer

- On the website (<https://biodatasci.colorado.edu/shortread/sr2023/>) under Day 1, open and follow the worksheet named **SSH Keys and AWS**
- You must
  - 1) Be logged into your GitHub account
  - 2) Have a terminal application open (see worksheet for details)
- After adding your SSH keys, log into the AWS:

```
ssh <github_username>@18.216.90.72
```
- If you need help, flag us with a **red sticky note**
- If you are successfully logged on, put up a **green sticky note**

# Library prep and sequencing

# Anatomy of a library

**P5/P7**

Ends that attach to flow cell

**Index 1/2**

ID sequences for multiplexing samples

**R1/R2 primers**

Sequencing primers

**Insert**

Fragment of sample DNA/cDNA

# Anatomy of a library

**P5/P7**

Ends that attach to flow cell

**Index 1/2**

ID sequences for multiplexing samples

**R1/R2 primers**

Sequencing primers

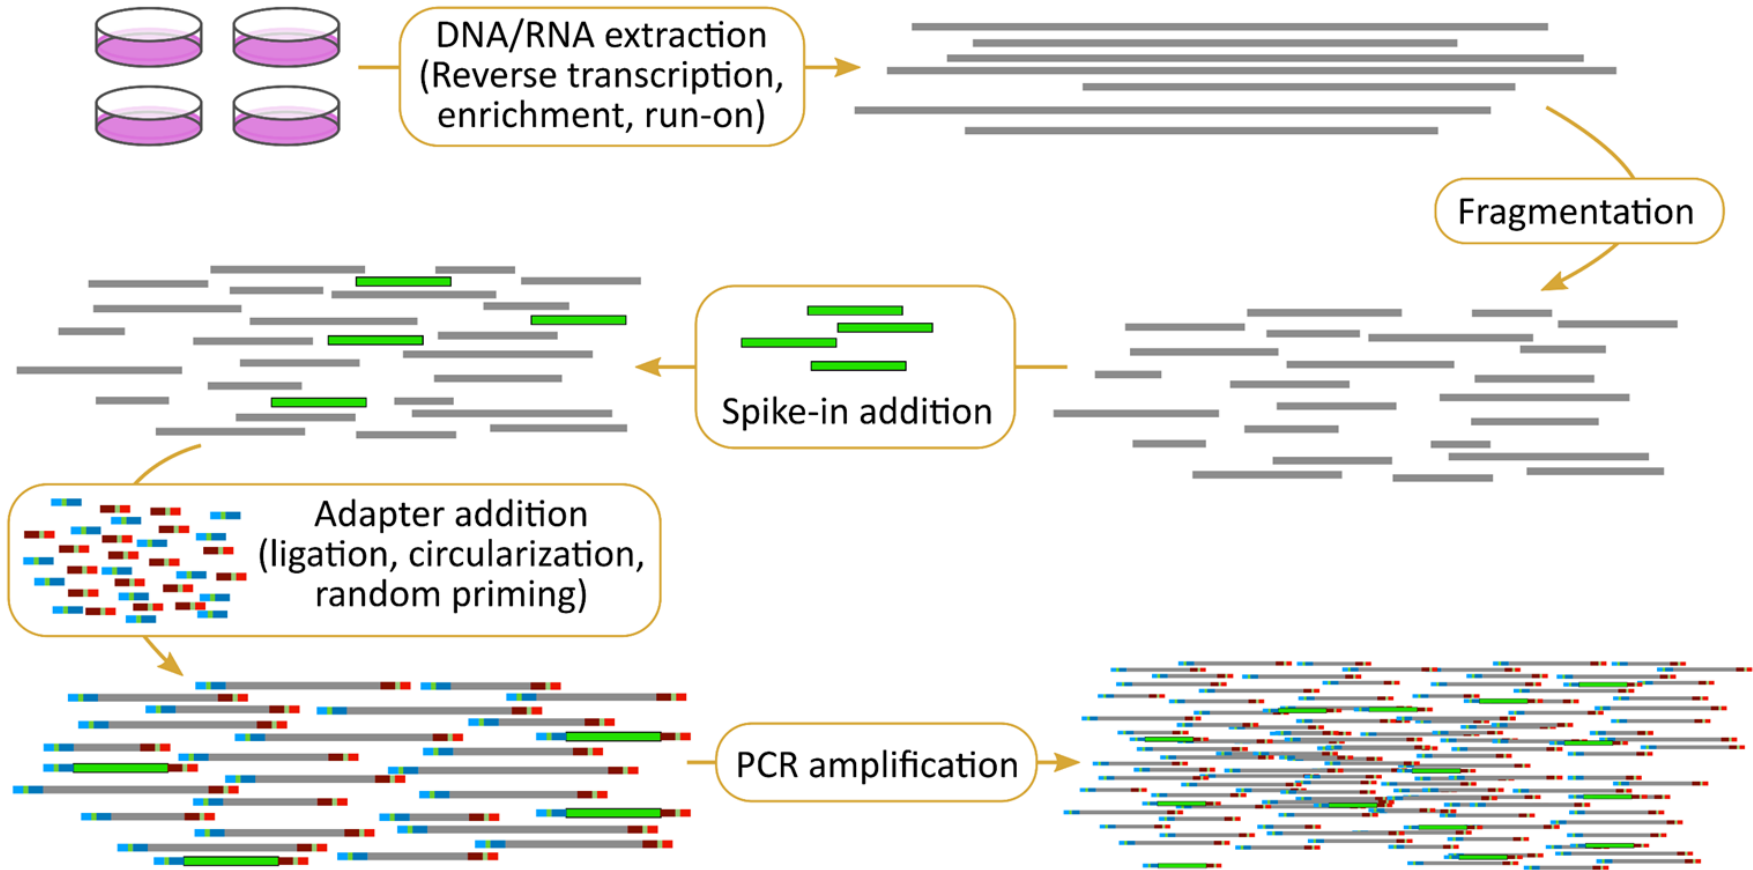

**Insert**

Fragment of sample DNA/cDNA

**Read**

Sequenced portion of fragment

# Creating libraries

# Illumina sequencing technology

Imaging a slide (flow cell) with millions/billions of DNA clusters by cycling in fluorescent nucleotides

Sequencing:

# Single/paired end sequencing

# Designing a sequencing experiment

# Basic Bash and Git/GitHub

- On the website (<https://biodatasci.colorado.edu/shortread/sr2023/>) under Day 1, open and follow the worksheet named **Git, GitHub, and basic Bash**
- You'll interact with the sr2023 GitHub repository. We will use this repository throughout the class  
This repo is at <https://github.com/Dowell-Lab/sr2023>
- If you need help, flag us with a **red sticky note**
- If you've cloned the repo and finished the worksheet, put up a **green sticky note**

# Break

(If you haven't gotten onto the AWS,  
please log into Google Shell now)

Library QC

# VIM and vimtutor

- What is VIM?
  - Text editor – read, write and save text files
  - Entirely keyboard-based
  - You cannot use your mouse to move the cursor!
- vimtutor is on every linux system and teaches you how to use vim – open it now

```
~$ vimtutor
```

# Variables in Bash (see worksheet)

- On the website (<https://biodatasci.colorado.edu/shortread/sr2023/>) under Day 1 (or from the GitHub repo), open and follow the worksheet named **Creating a variable in bash**
- If you need help, flag us with a **red sticky note**
- If you've cloned the repo and finished the worksheet, put up a **green sticky note**
